

Coding test IDSP 2025

When: Tue, September 30, 16-18h (instead of exercises)

Again: Tue, October 21, 16-18h (instead of exercises)

Preparation: Thu, September 25, during exercises & see learnIT

Format: Upload a Jupyter notebook on learnIT (exactly like assignment, 2h submission slot)

Allowed material: see next slide

If you take this test, you confirm the following:

I agree that copy-pasting code from others (including the internet) or communicating with others during the test is not allowed and counts as cheating. My solutions to this test reflect my own work only. I understand that apart from the above, I can use any aids during this test, including my own notes/code, lecture material, or looking up syntax on the internet, for example how to write a list comprehension, or names/parameters/uses of functions.

Suspicious submissions will be checked carefully and, in case, initiate a case for [exam fraud](#).

You may import any modules you want to work with, even if they were not covered in the lecture.
